

Introducing the paediatric

Voyager Car Seat

Specifically designed to provide enhanced support and safety for children with additional needs

Suitable for children up to 36kg, approximately 11 to 12 years of age, this seat offers robust protection and comfort tailored to your child's unique requirements.

A reliable and customisable solution for children who require extra support. Designed with safety and comfort in mind, it provides peace of mind for parents and guardians who need a specialised car seat for their child

transform lives

Key features

Specialised Support

The Voyager is meticulously designed for children who require greater support, ensuring they are securely and comfortably seated during travel.

Regulation R44 Tested

While this seat meets all the requirements of Regulation R44, it is not homologated, similar to many other specialised needs seats. This means it offers the necessary protection and support but is not officially certified by this regulation.

5-Point Safety Harness

Equipped with a 5-point safety harness featuring one-pull adjustment, the Voyager keeps your child securely in place. The harness also includes a chest clip to prevent it from being removed from the shoulders.

Enhanced Safety Features

The chest pads reduce your child's movement in the event of a collision, providing an additional layer of safety.

Customisable Comfort

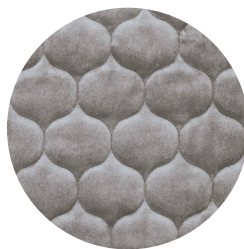

The luxury cover accommodates extra foam rolls and side supports, offering additional support where necessary. This ensures your child remains comfortable and well-supported throughout the journey.

Optional Accessories

For children who require more recline, an additional recline bar is available. There's also a seat extension option for those needing extra seat depth. Additional seat covers can also be purchased to maintain the seat's hygiene and comfort.
