# corner chair

Perfect for enhancing long-leg sitting, supporting hamstring stretches, and enhancing postural awareness, which contribute to developing strength and skills for independence

Together, we transform lives

# why choose the corner chair?

## A solid foundation for play and growth

It's the perfect floor sitter to help young children, starting from just eight months old, develop their sitting balance.

## Designed for stability and confidence

Some children can lose their balance and fall backwards or sideways while sitting on the floor. Our Corner Chair is designed to provide the support they need. The back and side supports gently hold them in place, while the front pommel keeps their legs in a stable, abducted position. This allows your child to focus on what matters most—playing and interacting with others—without the worry of falling over.

Do you have any bespoke paediatric seating requirements for children? Our friendly experts are here to help and offer FREE assessments.

## Grows with your child

It isn't just a static seat; it's a long-term solution. With a high degree of adjustability in the back, side angles, pads, and headrest, you can easily customise the chair to fit your child's unique needs. This ensures the chair will continue to support them as they grow, making it a valuable tool for years to come.
